

TradeBondFutures

Adjusted on: 10/5 30-Year Bond: The keys here are: taking out 138.20 (it MAY take extending the lows tho) can refocus us on a move to 136.00. Upside, extending the highs brings everything above into play –with 140.25 being the best fade. 10-Year Treasury Notes: Although this pivot DOES offer support, IF that support fails, we should see a pretty quick drop back to 124.225-22. If the bulls can hold the pivot and generate some strength (I'll use 125.095 to confirm that) we can look for a test of 125.23 and 126.01. 5-Year Treasury Notes: Even WITH the yield at this pivot it still needs to be bought carefully; it is the last real place the bulls can maintain control and avoid a move back down to 117.21. Upside, while 119.01_2 (and higher at 119.185 and 119.235) are all solid targets, the market needs to deal with tough resistance spots on the way to them. S&P500 Stock Index: WHO controls this pivot will be the key; bull control actually points to a move to 2014.25...weakness – and rejecting 1966.50 is included in this thought – will let SPs stay focused on 1920 and 1910.50
